WORK EXPERIENCE

Software Engineer | Haystax Technology | Washington, D.C.
Jan. 2020 - Present - Remote Job

• Develop a multi-tenant risk management system platform using React / Redux, Python Flask & MongoDB
• Lead migrating from Angular.js to React + Redux
• Create core components from scratch for the team such as custom Dropdown, Typeahead, Datatable, etc., and write usage documents
• Proficient with various libraries such as Mapbox, Nivo (D3), and LaTex for creating PDF files
• Maintain and fix various issues on the Python Flask server
• Write and improve unit tests (Jest / React testing library)
• Perform clear, concise code reviews
• Work in a collaborative Agile team with cloud repositories (Gitlab) using Git command-line

Software Test Engineer | SAMSUNG Electronics | Kansas
Jan. 2014 - Dec. 2019

• Lead team for developing automation test script using Python & internal Samsung Test Platform
• Run auto mation test on Android application – Robotium (Java), Monkey test (ADB command), & Samsung tool

PROJECT

Functional e-Commerce Web App | Self-developed | June - Sep. 2019
• Help client (JellyTree) to expand their business from Amazon to their own website
  with a similar CMS experience as with Amazon
• Use React, Context API, Redux, NodeJS in Firebase Functions to build REST APIs
  with NoSQL Firestore
• Customers can add products to the cart without login and merge them after login, CRUD their addresses, and filter products by color/size. And seller can CRUD their products via CMS page

Recipe Sharing Web App | Group-developed | Oct. - Nov. 2019
• Customizable, easy to use recipe sharing platform for individual users
• Take full responsibility to build back-end RESTful APIs including unit tests for each APIs and documents for front-end developers
• Show recommended recipes based on user preferences and they can be easily
  cloned, modified, and saved from other recipes with a few clicks

Apartment Management Portal | Self-developed | Mar. - May 2019
• Notify the residents when it's time they paid the rent and all other features
  for both managers and residents
• Use React for front-end and Serverless framework for managing AWS
  (DynamoDB, Cognito, S3, Lambda, API Gateway, CloudWatch)
• Key features include resident registration, maintenance requests, rent payment, announcement notification to residents, and more

EDUCATION

Bachelor's Degree in Computer Science | Incheon University | S Korea
• Excelled in Data Structure, Computer Architecture
• Joined Web Development Lab

Continued education - React-Native course | Udemy
